Outdoor Fun | Online Learning | Science in the Kitchen

Kids Column Outdoor Fun

With Spring starting to bloom, now is the perfect time to be a detective! Step outside and see how many new plants and flowers you can find growing in your yard or neighborhood. Tip: Look high and low. Check the ends of tree branches for leaves starting to grow.

Science in the Kitchen

The kitchen is a great place to learn! From math to science and even art, there is lots of learning to discover. This week, with the help of an adult, try to learn how to cook your favorite meal. Pay close attention to the ingredients and how much of each is used. Talk to your family while eating your meal about what you learned!

Attention Parents

The Project Link staff has been hard at work coming up with ideas and activities for you to do with your student(s) at home. We have thought of ways to continue learning outside of the school buildings while keeping safe and having fun. Each week we will send out a flyer with new ways to stay active and reach some of your student's academic goals. We will provide ideas on different subjects and ideas on how to keep kids involved and on a schedule at home. Ideas will range from science activities, art challenges, simple recipes, outdoor games for the family, rainy day movies and so much more! Please feel free to reach out if there is something you and your family are struggling to adapt to or if there is a topic you would like to see in our next flyer and we will do our best to tailor the next flyer to your needs! Please remember to keep you and your family safe while continuing your students' learning by following recommended health guidelines.

Link Teacher Spotlight

Ms. Mallick

While school has been closed I have been very busy! During the week I have continued planning exciting, fun and new activities for all of my Linkers. Besides working I have become a foster mom for the Cleveland Animal Protective League. My current fosters are two baby kittens that were a week old when I got them. Their names are Oreo and M&M, and they need to be fed every 2-3 hours; but they are so much fun to watch grow! I have also been having camp fires in my back yard and making s'mores. Yum! I also had a birthday in quarantine which was a lot of fun! I spent the day outside enjoying the warmer weather, eating birthday cake and practicing taking pictures with the new camera I received for my birthday! I have also made lots of new homemade meals such as veggie pizza.

Stay tuned for our next Link teacher spotlight!
